

MAJI SMART

The Operating System for Household Water

Aggregating drinking water vendors + last-mile dispatch via bodaboda & e-bike,
with M-Pesa payments, real-time tracking, and quality controls — Nairobi first, then Kenya.

33%

ANTLER PRE-SEED 2026

Nairobi · Kenya

Water is everywhere — reliable, safe water is not

67%

NO PIPED WATER

Only 33% of Kenyan households have piped access (KNBS/KDHS 2022). The rest rely on vendors, boreholes, or tankers.

Trust Gap

SAFETY UNCERTAINTY

Even when utilities supply treated water, most households still boil or treat — driving demand for delivered branded water.

Zero

DIGITAL DISPATCH

No unified platform connects households to vetted vendors with real-time tracking, quality controls, and flexible payment.

One app. Nearest vendor. Nearest rider. Water in 60 min.

1

Order

Choose brand or 'best value'. Select quantity (min 1x20L). Pay via M-Pesa or card.

2

Match

Algorithm routes to nearest stocked vendor + nearest available rider.

3

Dispatch

Bodaboda or e-bike rider picks up. Real-time GPS tracking sent to customer.

4

Delivered

Quality-verified water. Ratings collected. Refill subscription optionally activated.

A massive, underserved market with proven digital payment rails

ROLLOUT CITIES

Nairobi

Phase 1

4.9M pop · ~1.1M households

Mombasa

Phase 2

1.2M pop · ~270K households

Kisumu

Phase 3

600K pop · ~135K households

Nakuru / Eldoret

Phase 3

500K pop · ~110K households

Four revenue streams. Minimum order: 1 × 20L bottle.

Platform Commission

10–12% at launch
→ 12–18% at scale

On each water order value

Delivery Margin

KES 50–120 fee
minus rider payout

Improved via batching + e-bikes

Household Subscription

KES 199–349/mo

Priority dispatch · refill
scheduling · bundles

Vendor Subscription

KES 1,000–2,500/mo

Promoted listing · analytics · SLA
access

1×20L order: ~KES 50–60 gross contribution | **2×20L order:** ~KES 80–95 gross contribution | **Subscription + batching = path to profitability**

FINANCIAL MODEL — CITY-BY-CITY ROLLOUT

Revenue Trajectory (KES 000s / month)

Break-even: Month 16–22 · Profitability tied to batching efficiency + subscription attachment rate

City	Launch	Break-even	M24 Rev
Nairobi	M1	M18–22	22M / mo
Mombasa	M10	M28–32	8M / mo
Kisumu	M16	M34–38	4M / mo
Nakuru/Eldoret	M20	M36–40	3M / mo

KEY ASSUMPTIONS

- Avg order: 1.6x20L bottles per transaction
- Commission: 12% → 15% by M12
- Subscription attach: 18% of active users
- Batching efficiency: 2.4 drops/rider/hour
- Monthly burn: KES 1.0–1.6M (lean pilot)

Three paths to last-mile — choose by stage and density

OPTION A

Rider Network (Asset-Light)

Upfront Capex

KES 0

Cost per Drop

KES 60 / drop

Best for: Phase 1 launch

OPTION B

Hybrid: Own Fleet + Riders

Upfront Capex

KES 150K–300K
(5–10 e-bikes)

Cost per Drop

KES 35–45 / drop

Best for: High-density estates

OPTION C

Full E-bike Fleet

Upfront Capex

KES 600K–1.2M
(20–40 e-bikes)

Cost per Drop

KES 25–32 / drop

Best for: Scale phase only

Estate-first. Office-second. Lock channels before scaling supply.

Residential Estates

Partner with property managers. Bulk deals + scheduled refills. Captive audience of 50–500 households per estate.

Offices & Co-working

3–10 bottles/week per office. High repeat, predictable logistics, easy SLA commitments.

Retail Resellers

Kiosks and dukas as micro-pickup points. Reduces last-100m cost. Expands supply map.

FIRST 90 DAYS

D1–30

Onboard 20+ vendors · Recruit 30 riders · Finalise app MVP · Select 3 pilot estates

D31–60

Launch pilot zone · 200+ orders · Gather ratings data · Build vendor quality score

D61–90

500+ orders/month · 3 estate partnerships signed · First office accounts · Batch routing live

We win by being water's vertical operator — not a logistics generalist

Break-even target

5 cities

3-year roadmap

Water. Every day.

Water is Kenya's most consumed, most unreliable, and least digitised essential.

We are building the infrastructure layer that connects supply to demand — starting with a bottle, scaling to a city.
